Hearing Loop
Switch hearing aid to T-coil

What is a hearing loop and how does it work?

Hearing loop systems take sound straight from the sound system and deliver it right into the listener's hearing aid without extraneous background noise without having to pick up a separate listening device.

Do you use hearing aids?

All the user needs to do is switch his or her hearing aid or cochlear implant to the "T", telephone, or hearing loop program. All but the very smallest modern hearing aids tend to be supplied with this internal t-coil or telecoil. However, it may not have been activated when the device was initially programmed. If you are not sure whether your hearing aids have a t-coil, or you don't know how to access the T program, your audiologist or hearing aid specialist will be able to advise.

Don't wear hearing aids and you'd like to hear more in Church?

No problem! Our church offers listening devices that allow you to hear every word spoken in church. Please ask an usher for one of these devices with headphones. You'll be surprised how much better you will hear.

Questions about the Hearing Loop?
